Information on pulp bleaching

All fibres in our coated and uncoated paper grades produced at our European mills are bleached in processes that are at least elemental chlorine free (ECF).

Our own internal pulp is bleached in processes that are totally chlorine free (TCF). The total AOX figures for each paper grade are available on the Paper Profiles.

This statement is restricted to the paper in the state it is supplied by us. Printing and converting can have a significant adverse impact on the biodegradability of the final product.

With kind regards
